

Keyboard Wizard

for faster & easier typing

What is Keyboard Wizard?

Keyboard Wizard makes sure your Windows keyboard settings match your specific needs. This can make your typing easier and faster.

How does Keyboard Wizard work?

Do you know whether your current keyboard settings are right for you? Or how to adjust them if necessary?

Just type a sentence, and Keyboard Wizard helps you determine whether a change in settings will benefit you. With your approval, it makes the changes for you, so you don't have to.

The whole process takes only a few minutes. And it's easy to package up your new customized settings and activate them on any Windows computer.

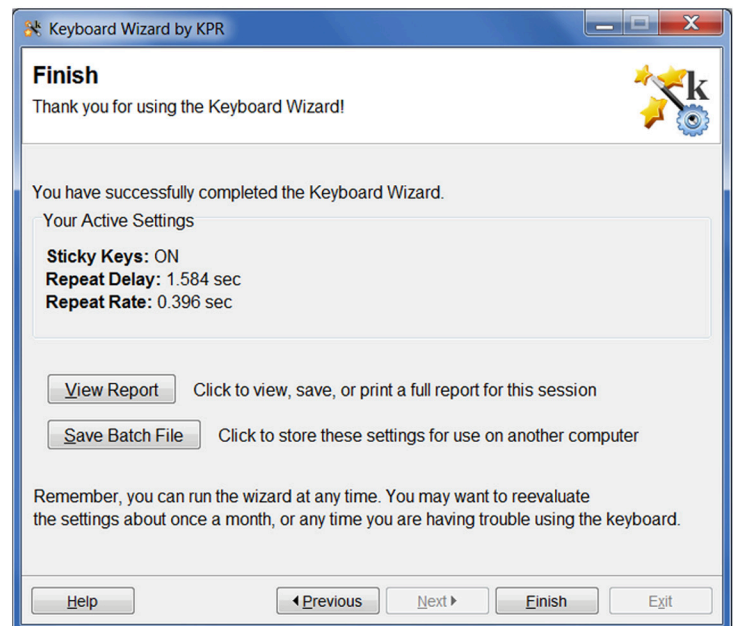

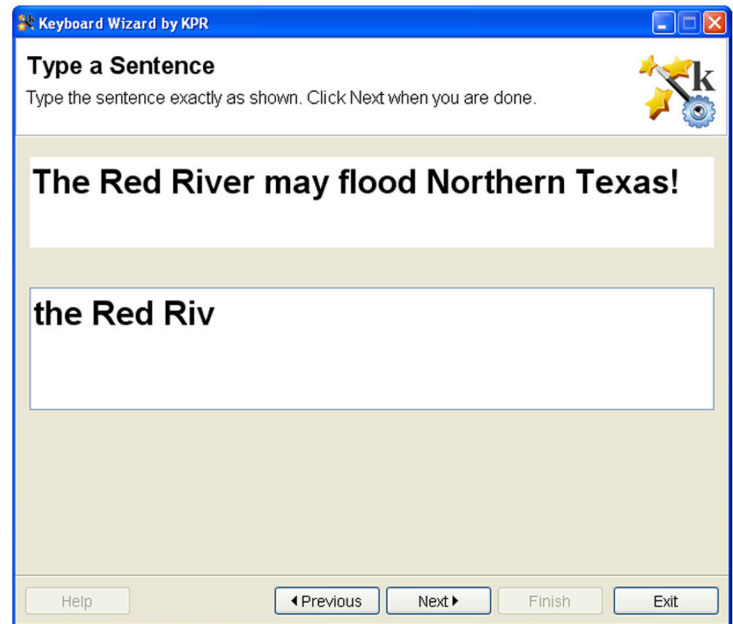

Who will benefit?

If you or someone you know has physical difficulty with typing, try Keyboard Wizard. Our research shows that sometimes a little change can make a big difference.

Great for assistive technology practitioners, too, to efficiently and effectively determine the best settings for Windows users. Practitioners will enjoy the reporting feature, as well.
