

Pointing Wizard

for faster & easier mouse use

What is Pointing Wizard?

Pointing Wizard makes sure your Windows mouse settings match your specific needs. This can make it easier and faster to use your mouse. Works for trackballs, trackpads, and other pointing devices, too!

How does Pointing Wizard work?

Do you know whether your current mouse settings are right for you? Or how to adjust them if necessary?

Just select some targets, and Pointing Wizard helps you determine whether a change in settings will benefit you. With your approval, it makes the changes for you, so you don't have to.

The whole process takes only a few minutes. And it's easy to package up your new customized settings and activate them on any Windows computer.

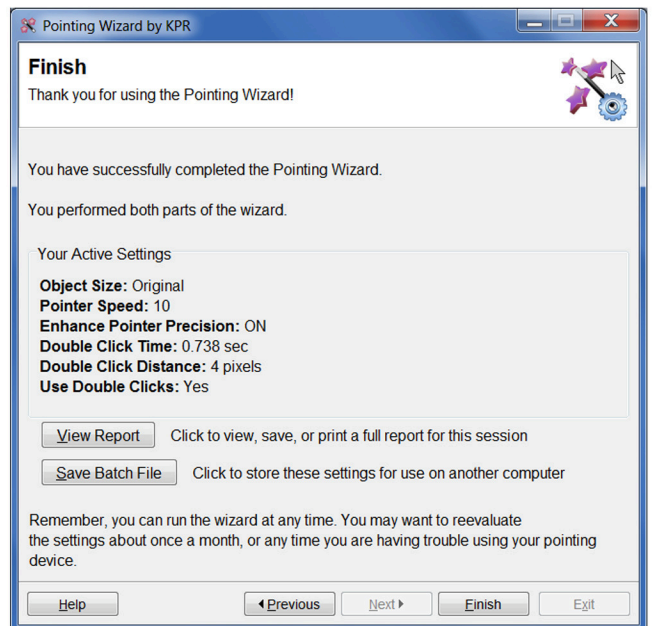

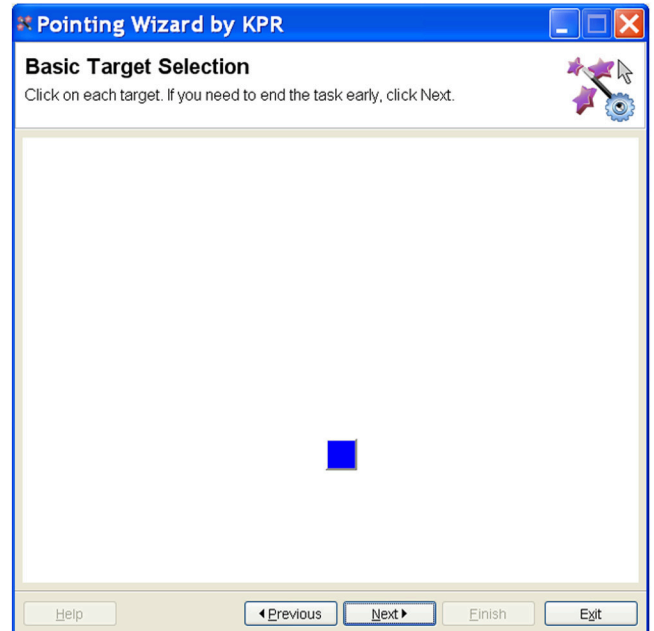

Who will benefit?

If you or someone you know has physical difficulty using the mouse, try Pointing Wizard. Our research shows that sometimes a little change can make a big difference.

Great for assistive technology practitioners, too, to efficiently and effectively determine the best settings for Windows users. Practitioners will enjoy the reporting feature, as well.
